TECHNICAL SPECIFICATION DOCUMENT

1. Technical Overview

This document describes the technical design for Material Master transfer using IDoc (MATMAS05).

Integration method: ALE (Application Link Enabling)

2. System Landscape

Source System → Target System

Communication → RFC

3. Configuration Details

3.1 Logical System

Transaction: BD54

Assign Logical System to Client

Transaction: SCC4

3.3 RFC Destination

Transaction: SM59

Connection Type: 3 (ABAP Connection)

3.4 Distribution Model

Transaction: BD64

Message Type: MATMAS

Sender Logical System

Receiver Logical System

3.5 Partner Profile

Transaction: WE20

Outbound Parameters:

- Message Type: MATMAS
- Basic Type: MATMAS05
- Port: RFC Port

Inbound Parameters:

- Process Code: MATM
- Basic Type: MATMAS05

4. IDoc Structure

Basic Type: MATMAS05

Important Segments:

- E1MARAM (General Data)
- E1MAKTM (Material Description)
- E1MARCM (Plant Data)
- E1MVKEM (Sales Data)

5. Process Flow (Technical)

1. Material saved in MM01/MM02
2. Change Pointer triggered
3. IDoc generated (Status 01)
4. IDoc sent to port (Status 03)
5. Target system receives IDoc
6. Function module processes IDoc
7. Material created (Status 53)

6. Function Modules Used

Standard FM:

- IDOC_OUTPUT_MATMAS
- IDOC_INPUT_MATMAS

7. Error Handling

Error IDocs stored with Status 51.

Reprocessing:

Transaction: BD87

8. Performance Considerations

- IDoc packet size optimized
- Background job scheduling
- Monitoring via WE02

9. Security Considerations

- RFC user authorization

- S_IDOC authorization object

- ALE authorization maintained

10. Conclusion

The integration enables automatic, real-time synchronization of Material Master data between SAP systems using standard IDoc technology.
